

Software Engineering G6046

Team Number	14
Names of team members present	Rohan Shah, Alexander Rojas, Evie Munro, Jude James, Rudy Pearson
Meeting Format	In-person
Date and time	29/1/25, 1:00PM
Meeting Coordinator	

Matters from last meeting

- N/A, first meeting.

Issues discussed at this meeting

- General team structure
 - Designated programmers, documentation, testing, and design roles out
 - Noted on a trial basis, can adjust depending on workload per role
- Initial agenda for game design and development
- How to effectively share the project amongst team members

Decisions agreed at this meeting

- Plan for initial project
 - Build off blank board template found by Jude
 - Use copyright free sprites
 - Create basic player with the following attributes:
 - Position
 - Money
 - Specialities (get out of jail free, etc)
 - Board attributes:
 - All player locations

- Legal moves
- Manage movement:
 - Movement of a player on the board
 - Implement turn swapping between computer & player
- Team has determined the main goal to be getting a minimal viable project running, then begin to add various elements such as the game, board, and different rules.
- Project platform
 - Will be using Unity 2D with C#
 - Code will be hosted and shared on a private GitHub repository
 - Jude will follow up with a tutorial to get Unity Hub setup and project cloned on all laptops
 - Rohan suggested using GitHub branches to manage merge conflicts and allow contributions from multiple people
- New platform for communication
 - Discord chat has been created and all team members have been added.
 - Will allow screen sharing and better collaboration for future virtual meetings

Date of next meeting

- Next meeting will be in person on 5/2/25 in the Library
